**Innovative/Alternative ISDS Technology Program**

**Vendor Information:**

Siegmund Environmental Services Inc.  
49 Pavilion Avenue  
Providence, RI 02905

**Contact:**

Laszlo S. Siegmund, P.E.  
Hollister S. Siegmund  
(401) 785-0130

**Technology Name:**

Norweco Singulair Model 900 and 960  
Maximum design flow rate 500-1500 GPD

**Technology Type:**

Aerobic Wastewater Treatment System  
Class II

**Certification Dates:**

**Issued:** April 23, 1997

**Renewed:** December 31, 1998

**Expires:** December 31, 2000

**CERTIFICATION**

The Department of Environmental Management has reviewed the Class II Innovative/ Alternative Technology application for the Norweco Singulair Model 900 aerobic wastewater treatment system, hereafter referred to as the "System". The System's technology relies on extended aeration to treat wastewater within a three-chambered concrete tank similar in size to a standard septic tank. The first chamber acts as an anaerobic settling area for incoming wastewater, the second chamber provides aeration via a motor aerator, and the third chamber provides final clarification of the effluent. All clarified wastewater passes through an effluent filter as it exits the System.

Based upon information contained in the application submitted by Siegmund Environmental Services, Inc, hereafter referred to as the "Vendor", the Department hereby accepts the System for listing on the RI DEM Innovative or Alternative Technology List. Design and installation of the System shall be in accordance with the following terms and conditions:

**I. Design Requirements**

1. Septic systems utilizing this innovative/alternative System shall be allowed a 35% reduction from the required leach field size for conventional systems. This reduction is based upon the ability of the System to remove BOD and suspended solids as demonstrated by the data presented in the Vendor's submittal. No reduction in leach field size shall be allowed for non-conventional leach fields (i.e. those not included in SD 11.05, SD 12.00 or SD 13.00 of the ISDS regulations).

2. Each applicant proposing a reduced leach field area shall demonstrate that sufficient land area is available on the lot to permit installation of a full size leach field. The full size leach field shall meet all ISDS regulatory requirements. (This is not a requirement that an entire "replacement" field to be available, only that enough additional land area be available to increase the "reduced" leach field area to standard size if ever necessary.)
3. Effluent from the system must be capable of meeting Class 1 National Sanitation Foundation (NSF) Standard 40.
4. Mechanical aeration is key to the performance of the System. To ensure Owner/Operator compliance with the System's operating requirements, all Systems shall be equipped with an hour meter and audible and visual alarms to indicate power interruption to the System. These indicators shall be mounted on a NEPA approved cabinet on the exterior of the building.
5. Each System installation shall meet all other applicable ISDS standards and receive prior approval by the Department pursuant to the regulations in effect at the time of application.
6. Design and installation shall be in strict conformance with the approved System design and installation manual and shall only be performed by a Rhode Island licensed Installer who has received training and is authorized in writing by the Vendor to install the System.
7. Under this approval, the System is not considered a nitrogen removal or pathogen removal system although the Department recognizes that the System may be capable of partially removing some of these and other pollutants.

## **II. General Requirements**

1. This Class II approval shall be effective until December 31, 2000.
2. If the Vendor wishes to extend this Class II Approval beyond its expiration date, he shall apply for and obtain a renewal of this approval. The Vendor shall submit a renewal application along with the appropriate renewal fee as denoted in (SD 23.00 (j) 4) at least 90 days in advance of the expiration date of the approval.
3. The Vendor shall notify the Department at least 30 days prior to any proposed transfer of ownership of the System technology. Notification shall include the name and address of the new owner and a written agreement between the existing and new owner specifying a date for transfer of ownership, responsibility, and liability for the technology. All provisions of this approval shall be applicable to any new owners.
4. The Vendor shall provide any purchaser of the System with a copy of this approval letter prior to the sale of the system.

### **III. Operation and Maintenance Requirements**

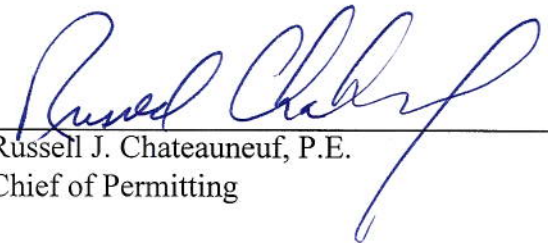

1. Detailed operating instructions shall be provided to the Owner/Operator.
2. Systems shall be maintained according to the manufacturer's specifications.
3. A public or private maintenance entity shall be retained continuously for the life of the System and be available to perform needed maintenance and repairs. Such entity shall perform an inspection of the treatment system at least twice annually. No agreement with a maintenance entity shall be for less than 2 years.
4. The Vendor shall have an inventory of System replacement parts available locally.

### **IV. Reporting Requirements**

5. The Vendor shall submit an annual report to the Department by November 30 of each year containing the following information for the previous 12 month period ending September 30 of the year: the number of systems installed in RI, the address of each installation and name of the owner and permit number, the number of inspections/maintenance calls conducted, and all known problems or failures experienced with a brief summary of the cause and remedial measures taken.
6. The Vendor shall report any termination or non-renewal of maintenance agreements to the Department and to the local waste water management authority should one exist for that area.

### **V. Rights of the Department**

1. The Department may suspend, modify or revoke this approval for cause, including but not limited to: non-compliance with any of the conditions or provisions of this approval, misrepresentation or failure to disclose fully all relevant data, or receipt of new information indicating that the use of the System is contrary to the public interest, public health or the environment.
2. This approval does not represent an endorsement of the System by the Department. This letter of approval may be reproduced only in its entirety.

Russell J. Chateaufneuf, P.E.  
Chief of Permitting
